

Ray's Roulette System

This system is very easy to understand and follow. I will give you the system exactly as it was explained to me and give you examples. Stick to it... It works very well.

When you arrive at the table, you need to obtain the last 5 numbers that came out. If there is a readerboard on the roulette table you are playing you can begin betting immediately. If there is no readerboard at the table you are playing, you can either stand there and record the next 5 numbers to come out or you can take a seat and play a few even money bets while you are recording the 5 spins you'll need to start.

Ok, let's say we watch the 5 numbers out last and record the following:

Spin 5: 16
Spin 4: 4
Spin 3: 19
Spin 2: 15
Spin 1: 9

Being that the 16 was the last number out, the 4 was the next to last number out etc...

We would make the following bets: (We are playing \$1 units)

\$5 straight up on the 9
\$4 straight up on the 15
\$3 straight up on the 19
\$2 straight up on the 4
\$1 straight up on the 16

If we hit on the first spin, start over with the last 5 spins and make the correct bets as we did above

Let's say the number 12 comes in and we lose. We would then make the following bets:

\$6 straight up on the 9
\$5 straight up on the 15
\$4 straight up on the 19
\$3 straight up on the 4
\$2 straight up on the 16
\$1 straight up on the 12

If we hit here, we will only stop and start over if we show a profit. If we win, but are still not in the profit, we will continue.

Let's say the 36 came out and we lost again. We would then make the following bets:

\$7 straight up on the 9
\$6 straight up on the 15
\$5 straight up on the 19
\$4 straight up on the 4
\$3 straight up on the 16
\$2 straight up on the 12
\$1 straight up on the 36

Basically, each time a new number comes out, you will place 1 unit on it and add 1 unit to the other numbers.

Let's say the next number is 00 and we lose, we would then bet the following:

\$8 straight up on the 9
\$7 straight up on the 15
\$6 straight up on the 19
\$5 straight up on the 4
\$4 straight up on the 16
\$3 straight up on the 12
\$2 straight up on the 36
\$1 straight up on the 00

We continue to do this until we show a profit and then we start the cycle over with the last 5 numbers that came out.

Now let's say the next spins is 19, and we win.

We would be up \$116 profit and we'd start the cycle over again.

\$5 straight up on the 16
\$4 straight up on the 12
\$3 straight up on the 36
\$2 straight up on the 00
\$1 straight up on the 19

Using this method, the longer it takes for a number to repeat, the heavier you will be betting on it.

Because of the law of the third, we know that in a full cycle of 38 roulette spins, there will be approximately only 24 numbers which will show. That means that approximately 14 of the numbers will repeat. Some twice, some three times, some 4 times or more.....

When those numbers came back and repeat they will be betting a greater amount on the number than the ones just spun.

This system works extremely well. Try it and you'll be very satisfied.

IMPORTANT:

1. Always set a stop loss. This system wins far more than it loses and can be used to make long term earnings. A losing session is far and few between. If your losses get too high in a particular session, stop and start over. You'll recover your losses very quickly.
2. If you show a profit at any point, start the cycle over with the last 5 numbers out.
3. Don't get greedy. I make about \$300 per day and get out until the next day.
