

MONGOOSE AGGRESSIVE

From the book The Future Gambler by Craig Greiner

This is a money management method consisting of a group of bets which are played as one Step and a Negative Progression which goes up whenever a Step is lost.

The idea is to complete the group of bets which overall produce a profit of 3 – 36 units depending on which point in the progression you are on.

The Progression:

1,1,1,2,2,3,3,4,4,5,6,7,8,10,12,15,18,22,26,32,38,46,55,67,80,100 = totaling 564 units spread over 25 Steps.

The Step is a group of bets a, b --- c1 or c2 --- d, e, 3f

The group consists of 3 stages:

- (1) Bet a and b which are a Parley – Bet 1 unit and if it wins then bet 2 units
If either a or b loses then you go to the next figure in the Progression.

- (2) Bet c1 and if this wins then go to (3), but if it loses then multiply the bet x 2 and try to win c2. If either c1 or c2 wins then go to (3).

If both c1 and c2 lose then you go back to (1) and the next figure in the Progression. However, because you have already won +3 units from (1) you don't actually lose.*

- (3) Bet d and if it wins then you are finished (in profit).
Bet d and if it loses you bet e and if e then wins you go back and try d again.
Bet d and it loses and then e also loses so you multiply the bet x 3 and bet 3f.
Win 3f and the game finishes (in profit)
Lose 3f and you go back to (1) and the next figure in the Progression.

Examples:

+1a +2b -1c1 – 2c2 start again -1a -1a -1a +2a -4b +2a +4b +2c1 +2d*

+2a -2a +3a +6b -3c1 +6c2 -3d +3e -3d -3e +9f

+3a +6b -3c1 +6c2 -3d +3e +3d

+3a +6b -3c1 +6c2 -3d +3e -3d -3e +9f

+3a +6b -3c1 +6c2 -3d +3e -3d -3e -9f

*Because the first try ended in neutral (0 +/-) it is ignored as far as the Progression is concerned and that is why when you start a new attempt you start with a repeat of the neutral bet.

Example based on betting Red

R	Bet a	1 unit	Win	
R	Bet b for Parley	2 units (1bet +1win)	Win	+3
B	Bet c1	1 unit	Lose	+2
B	Bet c2	2 units	Lose	0
Neutral so start again with the last bet used (here 1 unit)				
R	Bet a	1 unit	Win	
B	Bet b for Parley	2 unit	Lose	-1
Go up one step in the progression				
B	Bet a	1 unit	Lose	-2
Go up one step in the progression				
B	Bet a	1 unit	Lose	-3
Go up one step in the progression				
B	Bet a	2 unit	Lose	-5
Go up one step in the progression				
R	Bet a	2 units	Win	-7
R	Bet b for Parley	4 units	Win	+1
R	Bet c1	2 units	Win	+3
R	Bet d	2 units	Win	+ 5 end of game

However if you had won the Parley then lost the c1 bet:

B	Bet c1	2 units	Lose	-1
R	Bet c2	4 units	Win	+3
B	Bet d	2 units	Lose	+1
B	Bet e	2 units	Lose	- 1
R	Bet 3f	6 units	Win	+5
