

Double Attack 2.0© - Baccarat Strategy

Congratulations! You just got a great Baccarat strategy.

Before you start betting using the strategy, I would highly recommend that you read through all the instructions and understand how to use it.

The strategy is ideal for playing at online casinos. You can track several baccarat tables at once on your screen and play from your home. You can also play at your local casino however you will have to face the crowds of people to track some tables.

This file will show you all the knowledge you need to use the strategy and start playing.

Some advantages of playing Baccarat rather than another casino game. (Roulette for example).

- It's an honest game.***
- The house edge is minimal (practically 50/50).***
- Lower variance (Roulette has an infinite variance).***
- No dealer cheating (Some casinos use electronic devices to accelerate and decelerate the wheel making it impossible to know in which sector of roulette the ball will land).***
- No zero. (The main reason why it's hard you to win long term playing roulette).***

How to play Baccarat

The dealer deals out the cards face up—two each for the player and banker—and whichever hand totals closest to nine wins. If you've bet on the player hand and it has the closest to nine, the winnings are simply double what you bet. If you've bet on the banker hand and it wins, it pays 95 percent of your wager.

When the cards dealt are greater than nine, you have to add the two together and drop the one (or two) to get the value. For example, a hand of nine and seven cards dealt would add up to 16, and with the first digit dropped, the value in the game is six.

Here are some more rules to help you ace a baccarat game:

If either the player or banker is dealt a total of eight or nine, both the player and banker stand.

If the player's total is five or less, then the player will receive another card. Otherwise, the player will stand.

If the player stands, then the banker hits on a total of 5 or less.

The final betting option, a tie, pays out 8-to-1. Conveniently, there are also sheets at the table for you to keep track of your score.

The Strategy

After several attempts to win playing baccarat and losing money I decided to stop playing and start studying the game.

I spent several hours a day for months studying the game and learning to read the shoes until I could create this strategy.

A lot of shoes were studied and tested. Dozens of sessions were played with real money.

Well, enough talk. Let's go to the strategy!

I will give you several examples of how to use the Double Attack 2.0© strategy showing images of some real bets that have already been played.

The goal of this strategy is to get only ONE win per shoe.

Do you think that's not enough? You can play only a few sessions and recover the money invested.

You can play as many sessions as you want. It depends on how much time you have available to play and your bankroll.

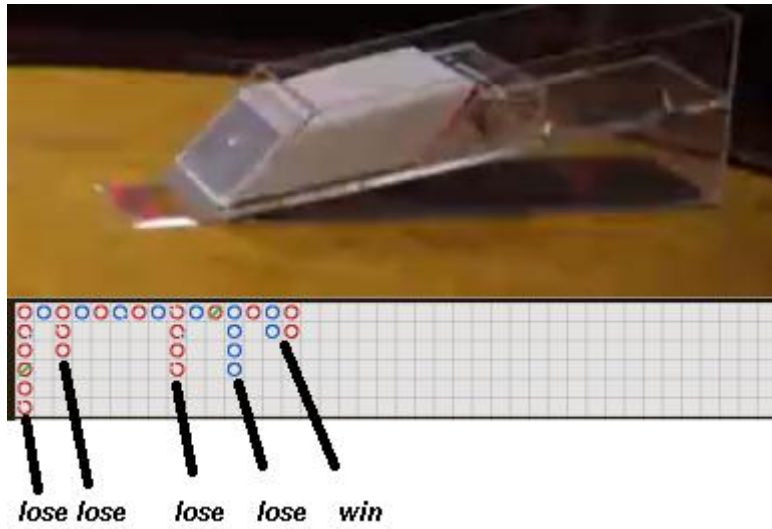

For the strategy to be successful, you will need to use a Trigger and a Short Progression.

A three step progression (1, 2, 4...) is the best one. I'll talk about it later.

Note: Keep in mind that you will need patience and discipline. It is a long-term winning strategy.

Now I'll show you how to use the Double Attack 2.0© strategy giving you some examples.

Example 1

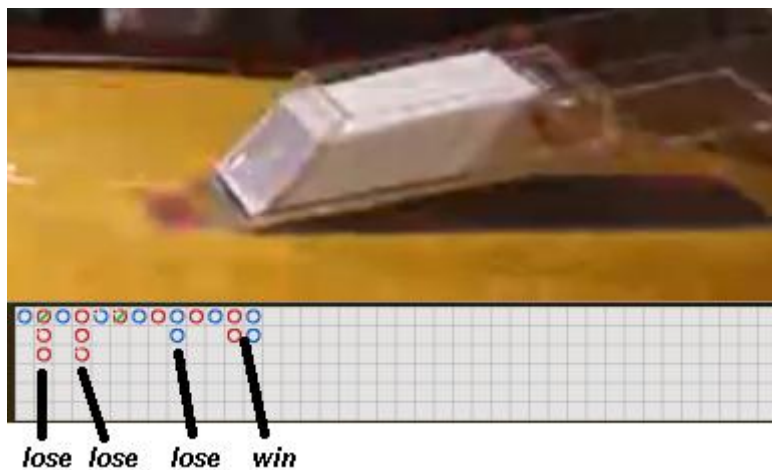

As you can see in the picture above, the trigger is to start betting **after 3 virtual losses**.

In this case you would win at the **second step** of the progression because after the trigger you had a loss.

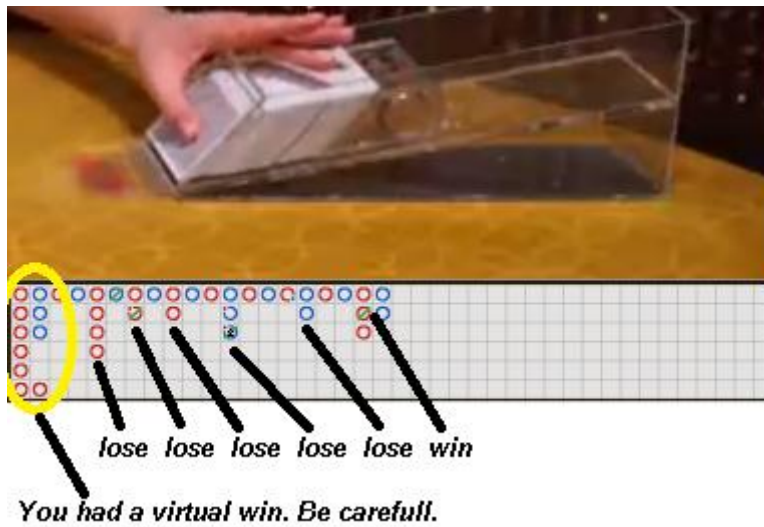

The goal of the strategy is to bet that

Example 2

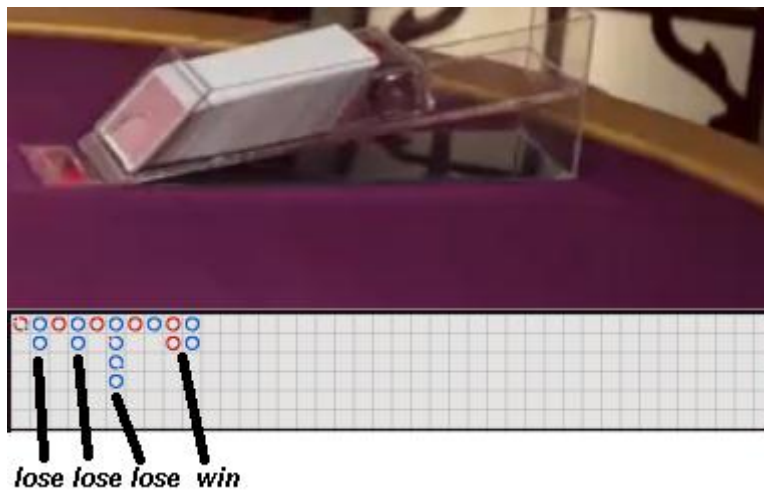

In this other example you would win at the **first step** of the progression.

Example 3

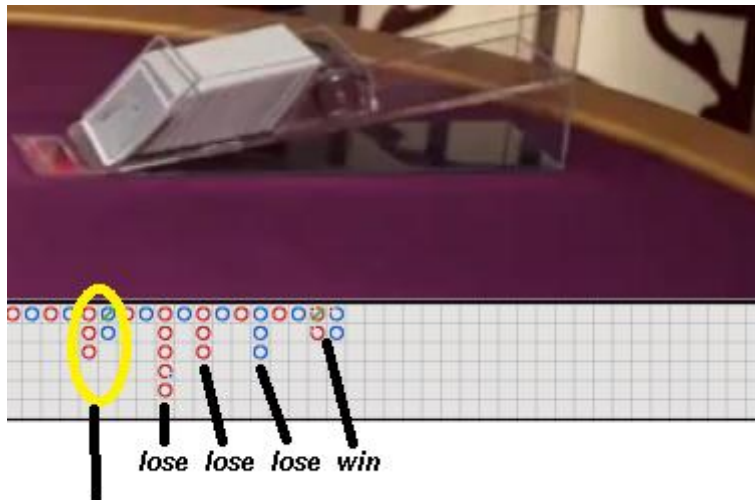

You would win at the **third step** of the progression.

Example 4

You would win at the **first step** of the progression.

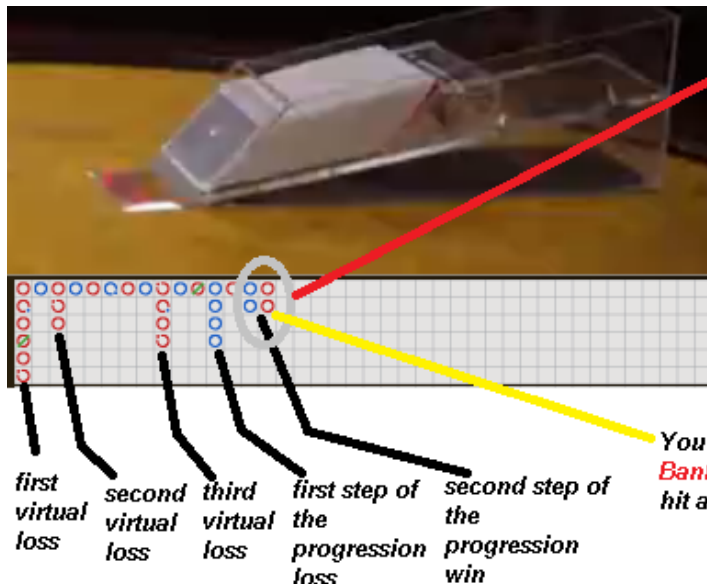

Example 5

Warning! You had a virtual win. Be carefull.

*In this other example you would win at the **first step** of the progression*

Double Attack 2.0© - Step by Step

As you can note, the goal of the strategy is to bet that two columns will become clustered.

See another example:

*You would bet **Player** here. **Player** hit and you win.*

*You would bet the **Banker** here. **Banker** hit and you won.*

The trigger is to wait for three single columns (three virtual losses) and start betting.

As you have realized, it is important to bet only after the trigger of 3 virtual losses. This ensures that we do not use a long progression.

*About Tie: When it does, **just ignore it**. Keep betting because it will not influence the strategy.*

Extra advices:

During all tests performed, I've never seen a sequence of 8 unique columns in a shoe. It's a very rare event. For example:

B	P	B	P	B	P	B	P	B	P	B	P	B	P	B	P	B	P	B	P	B	P	B	P	B
	P		B		B			P		B			P		P								B	
	P				B		P		B			P		P										
				B								P												

As I said before, you will use a three-step progression after three virtual losses: 1, 2, 4.

If this progression is not enough, you will keep betting on recovery mode until you win. Example:

*1, 2, 4: if you lost, keep betting on recovery mode until you win (two columns become clustered): 3, 6, 12 or 4, 8, 16... etc.
It's your choice.*

Keep in mind that if a rare event occurs and you lose, you will win more than you lose in the long term using the recovery mode. The win rate will be great!

That's all!

Thank you for support my work and purchasing the Double Attack 2.0© strategy!

I wish you a lot of success!
