

Hello - here is the instruction for Code4 script.
Please test it - before play real money.

In case of any question, any wrong calculations or some other moments that you think are wrong - please read the FAQ.

https://docs.google.com/document/d/1Kk2fCsNlfxCjWfvrlGD7NzIRUo6q6-BoZsYaCS_BG0o/edit?hl=en&authkey=CMbdo_MF

In case you don't find the answer - feel free to ask me using the steps FAQ.Question1.

Instructions

All 2 files (*.psc) must be in the same directory.
The main is the **code4.psc** - all changes you do in it.

In the script you need to pay attention to the next lines:

Line 97 - indicate chips values

Line 102 - the path where output files will be saved

Line 105 - indicate the file_name with numbers - for simulation_mode=2

Line 108 - indicate the file_name with numbers - for simulation_mode=4

The start_amount, wish amount, stop_loss you will introduce in the window after the script Run.
The option for play_mode you will introduce in the window after the script Run.

Line 91-92 - indicate main settings

```
elements=[  
    [0.1,1,0,['Roulette Pro - Casino Tropez',1500,600]],  
    [0,12,0,2,['D1','D2'],[0,1,3,9,27],2,[0,'']]  
];
```

with bold are selected values you may change. All other value - you don't change.

0.1 - the value of 1 unit

1 - for stop_loss - write 0; for trailing_stop_loss - write 1

0 - restart_after_lost - what to do in case of reach the end of progression and lost - 0=stop the all game; 1=restart the current element

Roulette Pro - Casino Tropez - casino name

1500 - The script will stop after XXX spins, set=0 to not use

600 - set the time in seconds after the script will stop(600 - mean 10 minutes), set=0 to not use

12 - how much records we need to have - 3 sets by 4 spins = 12 records

1,3,9,27 - progression - in units

Please change settings very carefully.

Final.

Just try in different ways - and don't be afraid to break something. Play in Casino.FunMode - for first tests - in order to not lost some money.

Good luck !!!
